

Test Architect™

“LogiGear’s ABT Solutions have saved both time and money for Intuit. I wouldn’t hesitate to recommend it to any of my professional colleagues.” - Heather Della Rocca, Intuit Corporation

The Centerpiece of a Complete Functional Testing Solution

LogiGear delivers the TestArchitect™ test automation toolset at the center of a complete test automation framework that will enable your testing team to test earlier, test more, reduce costs and speed time-to-market. TestArchitect integrates the latest methodologies and technologies in one easy-to-use package.

A Framework for Better, Faster Software Testing

TestArchitect is part of the Action Based Testing™ framework that enables your organization to align software development and testing groups, unite test designers, testers and automation engineers, and integrate your onshore and offshore testing teams.

Delivered with Customized, Turnkey Automation Suites

LogiGear can deliver TestArchitect complete with turnkey test automation based on your existing test cases, or help you design new tests from the ground up. Tests designed with TestArchitect can be executed manually or automatically, and can be quickly and easily changed to adapt to each new release. In addition, these tests can be designed and executed by any tester who can use a spreadsheet and can be automated by any engineer who knows industry-standard languages.

A Global, Organization-Wide Software Quality Solution

Based on your organizations’ unique situation, LogiGear can provide innovative solutions integrating the best of offshore outsourcing, US management, advanced test automation and global industry thought leadership.
